Lai Kah Keen

Senior Software Engineer — AI agent tooling and SaaS frontend

laikahkeen@gmail.com | +60 16-215 9518 | Cheras, Selangor, Malaysia | laikahkeen.com | github.com/laikahkeen

PROFILE

Software engineer who builds the AI agent tooling other engineers adopt, and ships the product frontend on top of it. Wrote the Go MCP server now used beyond engineering — by product and non-technical business teams — to connect AI agents to the company's task tracker, with two more shipped: one inside a commercial product, one a personal system in daily use. Strongest on production frontends — Vue 3, React, React Native — and owns the billing and Go APIs behind them.

EXPERIENCE

Frontend Developer → Senior Software Engineer — ABC Sales AI — Aug 2025 – Present

Remote | part-time and contract May 2024 – Jul 2025

- Wrote and hosts an **internal MCP server in Go**, adopted **beyond engineering — by the product and non-technical business teams** — to connect their AI agents to the company's task tracker.
- Build and ship product features on a multi-tenant **SaaS frontend serving 1,400 companies** (Vue 3, Pinia, PrimeVue, Tailwind), carrying work from requirement through to production.
- Own **billing and subscriptions** across the frontend and the Go API behind it, including a silent MYR→TWD migration that moved live subscriptions across plans with no customer-facing disruption.

Contract Engineer — Boostomatic — Mar 2026 – Present

Remote | marketing agency, in production | alongside full-time engineering work

- Built a Go service replacing **30+ hand-maintained Notion automation rules** with one YAML config, routing task digests to 14 Slack channels across 8 client accounts on a cron schedule.
- Added a Gemini-backed Slack assistant for reading and writing Notion tasks, designed so a non-developer operates it without touching code.

Software Developer — Kloudius Services — Mar 2024 – Jun 2025

Kuala Lumpur, Malaysia

- Maintained and extended a cross-platform **React Native TV streaming app** — modular TypeScript components, Redux and Zustand state, Jest coverage, and accessibility fixes for constrained TV hardware.

Automation Specialist → Lead — FAR Capital — 2021 – Feb 2024

Kuala Lumpur, Malaysia | business automation, internal CRM and tooling over MySQL

PROJECTS

propbook	Property-analytics product, built solo and live — Go engine, MCP server, Next.js, Stripe billing
keen-ops	Personal life-OS in daily use — Go Telegram bot, **finance MCP server**, Next.js PWA, event-sourced SQLite where writes carry their own inverse
CSI Prop	Property firm, May 2024 – Feb 2026 — standardised automation workflows, built with non-technical stakeholders
Earlier	ideahook (Go, Redis, LLM) and batch.video (React, Electron, FFmpeg) — laikahkeen.com

SKILLS & EDUCATION

AI	MCP servers, LLM integration (Gemini, multi-provider), function calling, agent workflows
Frontend	TypeScript, Vue 3, Pinia, React, React Native, Next.js, Tailwind CSS, Vite, Jest
Backend	Go (Gin, Chi), Node.js, PostgreSQL, SQLite, Redis, REST, OpenAPI
Infra	Docker, Terraform, AWS Lambda, Railway, GitHub Actions
Spoken	English (fluent), Mandarin (native), Cantonese (native), Malay (conversational)
Education	Taylor's University — BSc (Hons) in Architecture, 2018 – 2020
